StructuredGround[™] Grounding Kits for Net-Access[™] Cabinets and 4-Post Racks

SPECIFICATIONS

Structured grounding kits shall be UL Listed, CSA Certified, and RoHS compliant. Grounding strip and connectors shall be tin-plated. Grounding strip shall comply with EIA universal mounting hole spacing and mount to standard racks and cabinets. All components shall be bonded to the rails with paint piercing hardware. Electrostatic discharge (ESD) ports shall be mounted to both the front and back of the rack or cabinet. Equipment shall be bonded to the grounding strip with a discreet jumper and two-hole long barrel compression lugs. There shall be a #6 AWG copper code discreet jumper that terminates on the mesh common bonding network (MCBN) with a copper compression HTAP and attaches to the grounding strip using a two-hole, long barrel compression lug. The compression lugs shall meet NEBS Level 3 criteria and have inspection windows. All jumpers shall have green-and-yellow VW-1 rated insulation. If the 4-post rack or cabinet is not fully bonded, where rack or cabinet sections bolt together a provision must be made to ensure metal-to-metal contact. An acceptable means of creating this metal-to-metal contact is deploying a tin-plated copper busbar and front-to-back grounding jumpers to bond to all mounting rails.

TECHNICAL INFORMATION

De aferrar e a e levre le	LUL Listed COA Cartified DeLIC Compliant
Performance level:	UL Listed, CSA Certified, RoHS Compliant
Packaging:	 Common bonding network (CBN) jumper kit is supplied with one copper compression HTAP, mounting hardware, and antioxidant
	 Grounding strip kits are supplied with mounting hardware and antioxidant
	 Equipment jumper kits are supplied with mounting hardware and antioxidant
	Surge suppressor jumper kit is supplied with mounting hardware and antioxidant
	Grounding busbar kit is supplied with 20 hex head screws pre-installed, mounting hardware, and flat washers for mounting
	 Front-to-back rail jumper kits are supplied with mounting hardware, two grounding stickers, and antioxidant

KEY FEATURES AND BENEFITS

Visually verifiable ground system:	Provides a dedicated, low resistance, and visually verifiable ground system to maintain system performance, protect network equipment, and maximize uptime
Paint piercing components and thread-forming screws:	Eliminate the need to manually remove paint from the rack or cabinet, saving labor and cost and minimizing metal shavings
Flexible design:	Can be installed on readily available, new and existing racks and cabinets that meet EIA-310-D; allows up to 45 units to be grounded
Complete system of matched components:	Saves labor and cost by making it easy to select components and kits for the particular rack grounding application

APPLICATIONS

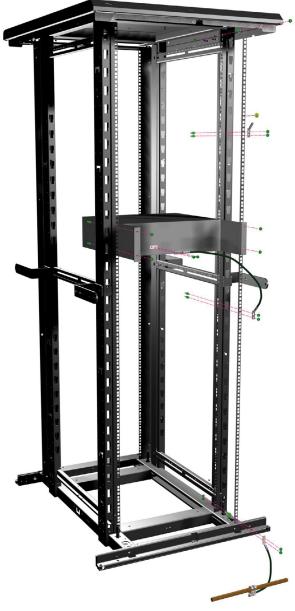

Because data center racks and cabinets are typically painted and bolted together, electrical continuity throughout the rack or cabinet is not assured. StructuredGround Grounding System Kits provide a solution for properly grounding racks, cabinets, and housed equipment. Paint piercing components are available to provide continuity between frame members. Thread-forming screws or bonding studs are supplied with the grounding kits to provide a bond between the grounding strip and the rack or cabinet by removing paint from thread holes and minimizing metal shavings. The grounding strip can be connected to the raised floor or overhead system ground using the common bonding network (CBN) jumper. Network equipment is bonded to the grounding strip using available equipment jumpers and paint piercing hardware.

	Common Bonding Net (CBN) Jumper Kit	work	
	#6 – #2 AWG (16 – 35mm ²) HTAP, 60"(1.52m) L, #6 AWG (16mm ²), factory terminated on one end:	RGCBNJ66	0P22
