

Firmware CSV Flash Procedures

Instructions to Test SZ Appliance & .CSV Upload

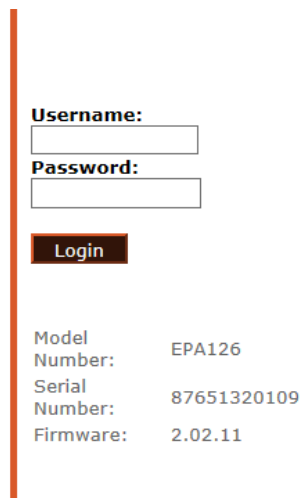

This document assumes basic knowledge of networking and gateway and IDM operating procedures.

- 1) Setup: To setup IP address on laptop:
 - a. Go to Start/Control Panel.
 - b. Click on **Network & Sharing Center, Change Adapter Settings.**
 - c. Pick the Local Area Connection (probably Intel xxxxx). Right-click **Local Area Connection**, go to **Properties**, locate TCP/IP v4 Address, and highlight and click **Properties** again.
 - d. Type in an IP address as shown in the picture below. Include Subnet Mask and Default Gateway, click **OK**, and **OK** again at Local Area Connection Properties screen. You can now close Control Panel.

- 2) Connect the appliance to the PC with an ethernet cable.
 - a. Power the appliance.
 - b. Wait approximately 60 seconds until all the activity lights are flashing.

- c. Open a browser on the laptop and type in the IP address for the target appliance. The factory default is: http://192.168.0.253.
- 3) Verify the firmware version by reviewing the information in the bottom right section. Verify that the Firmware version is 2.02.11 or greater.

The screenshot shows a login interface with the following elements:

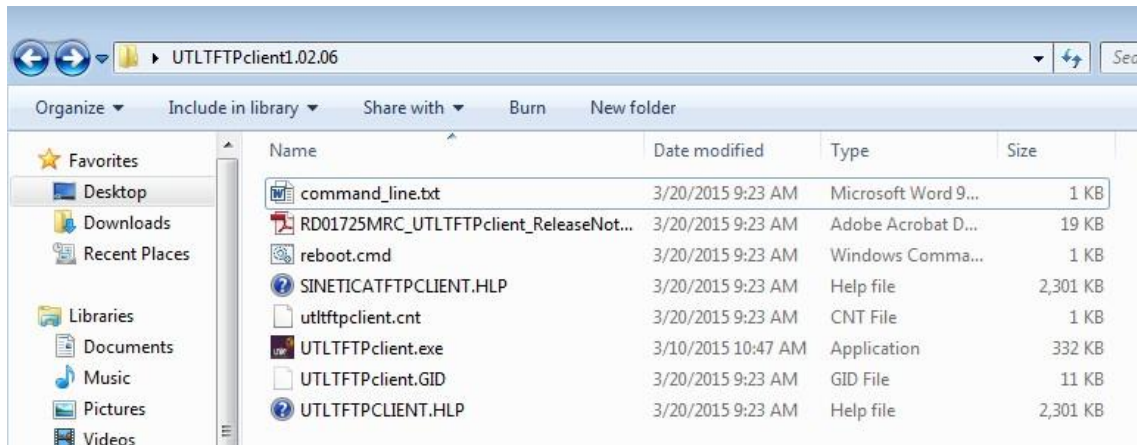

- Username:** [input field]
- Password:** [input field]
- Login** button
- System information:

Model Number:	EPA126
Serial Number:	87651320109
Firmware:	2.02.11

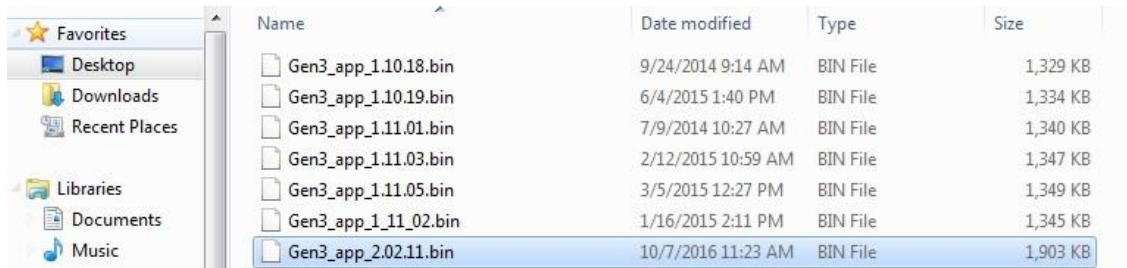

- 4) If firmware version is lower than 2.02.11, the “Firmware Upgrade Procedure” is required (Step 5). If firmware version is equal or greater 2.02.11, skip to step 6.
- 5) **Firmware Upgrade Procedure.**

The following files are required (these files are obtainable via IMS Product Management or System Support):

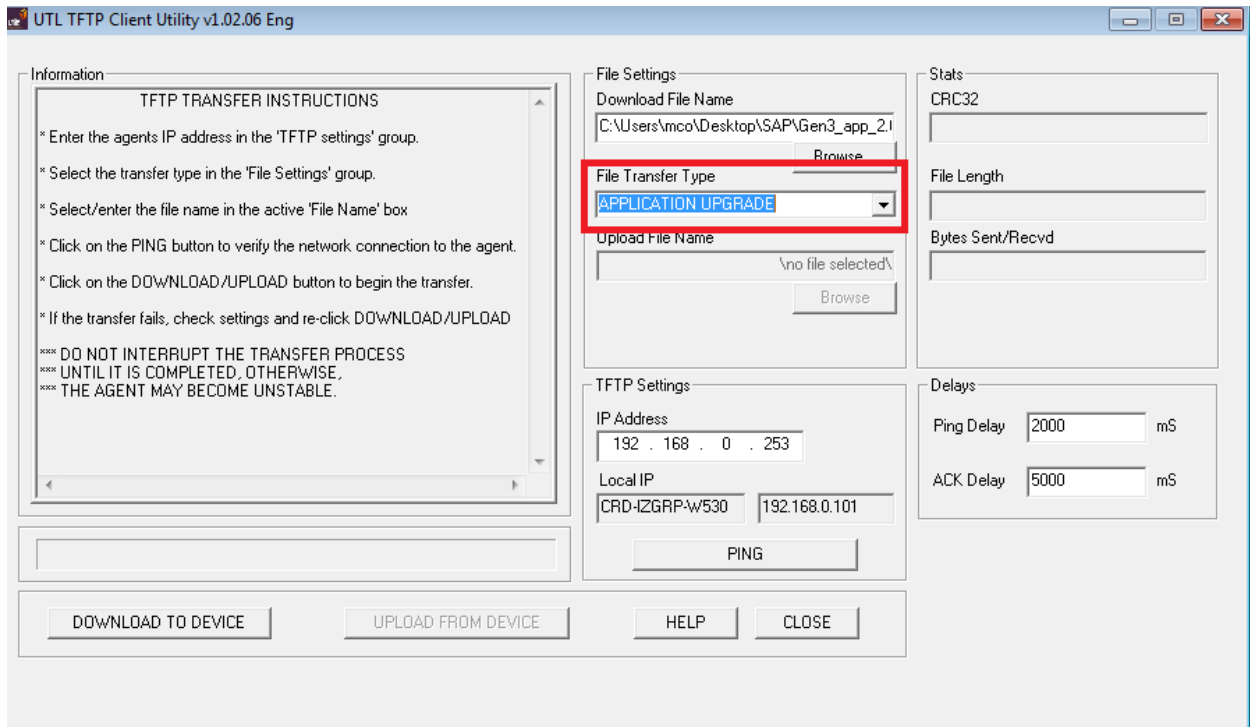

- UTLTFTPclient1.02.06.exe – Windows executable for downloading and uploading to the appliance. Once launched it will extract to a folder. Double-click UTLTFTPclient.exe to begin.

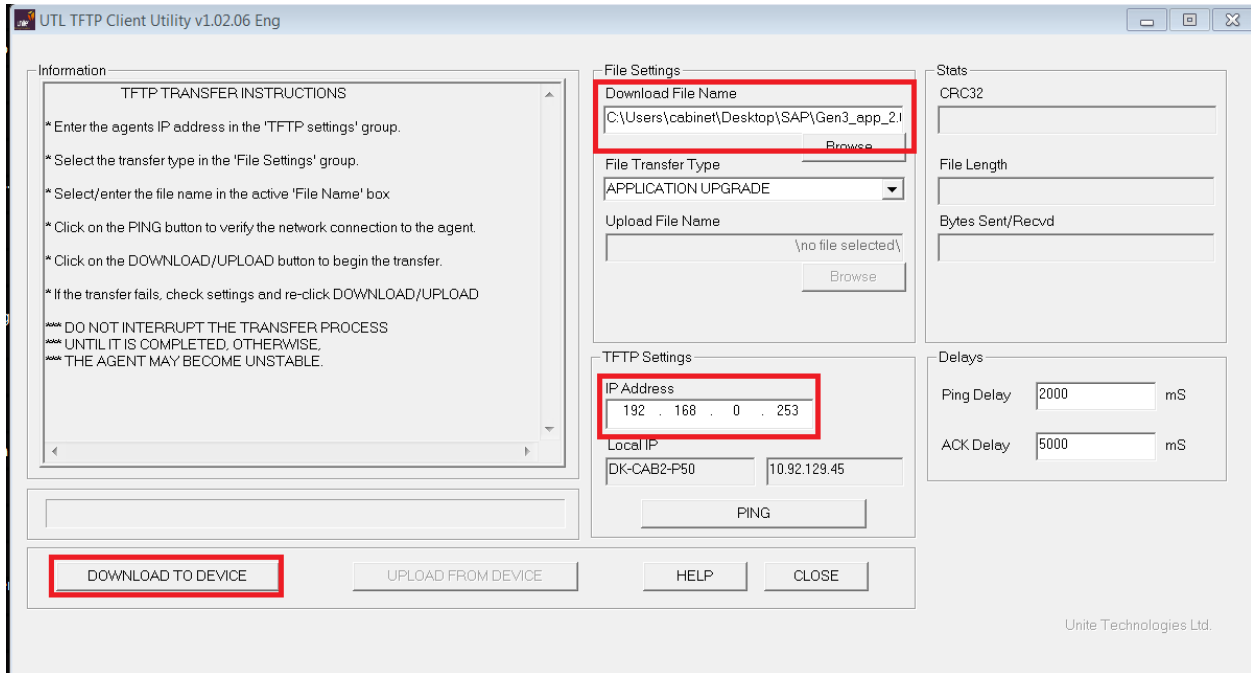

- Obtain Firmware version v2.02.11 from IMS/System Support, named Gen3_app_2.02.11.bin.

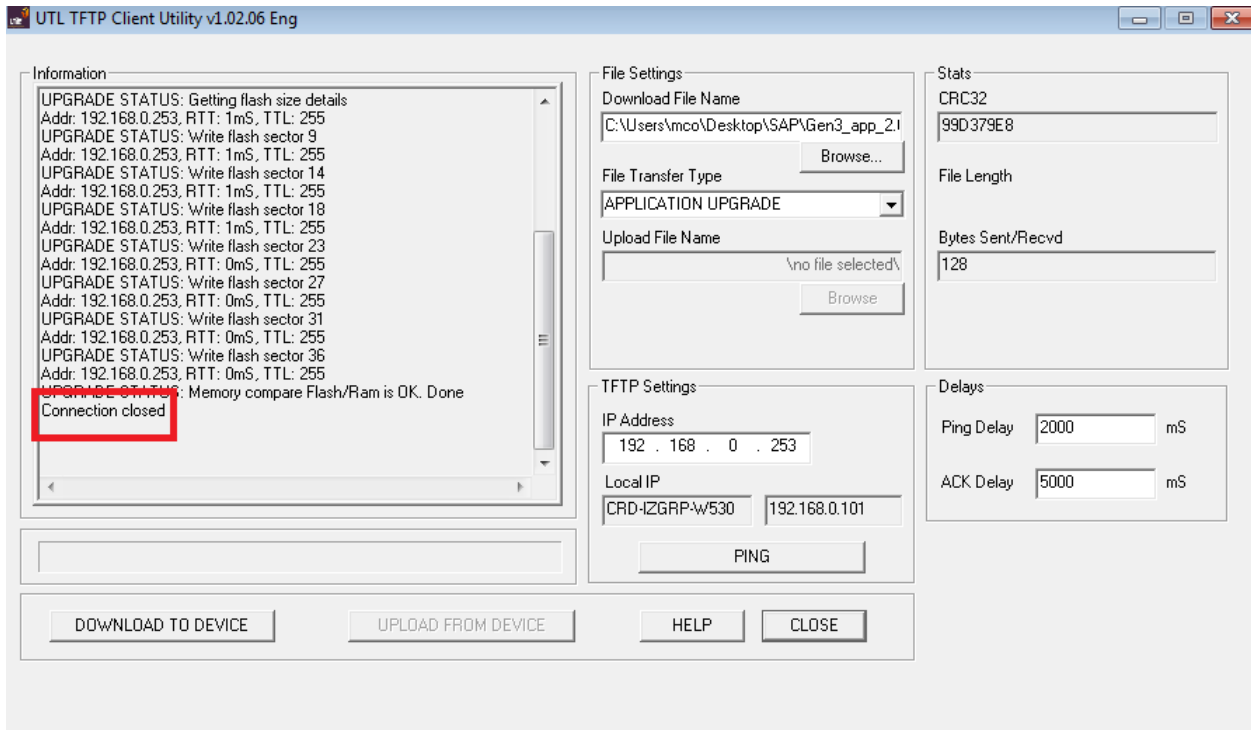

- Launch UTLTFTPclient.exe. Select **APPLICATION UPGRADE** from the File Transfer Type list box.

- Point the Download File Name box to the Gen3_app_2.02.11.bin file location using the Browse button, and click **OPEN**. Change TFTP settings IP address to **192.168.0.253**.
- At the bottom left of the application, click **DOWNLOAD TO DEVICE** and wait for the operation to complete.

- Once the operation completes, you will get a “Connection closed” message in the Information section

- At this point, the gateway will reboot. Wait approximately 60 seconds, and then return to a browser window and enter **http://192.168.0.253** and login with credentials User: **admin**, Password: **admin**. Ensure you get to an Overview screen.

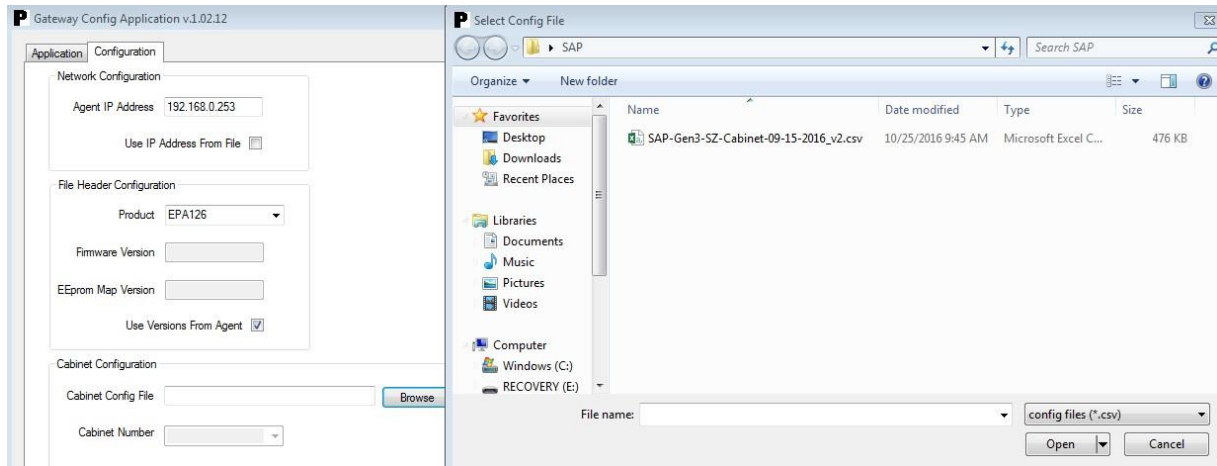

6) .CSV File Load

- Now that the appliance is at the minimum necessary firmware version, load the customer-specific appliance information. This file will be pre-defined by the Converged Infrastructure or Data Center groups to ensure the customer's cabinet and/or site-specific information is predefined for ease of deployment.
- This file will be provided by the Data Center and/or Converged Infrastructure groups for specific customer deployments, and is to be used only for the intended named customer.
- To load the .csv file, first ensure the file is not open in Excel during deployment. Copy the file to a location that is easily findable via an application, such as Desktop, etc.
- Obtain the Panduit Gen3 Gateway Config Application (currently v1.02.12 or above) from the Data Center group.

- To load the configuration, click on the **Configuration** tab at the top left. Once that opens, click the **Browse** button by the Cabinet Config File, find the .csv file you copied to the location in the step above, and click Open.

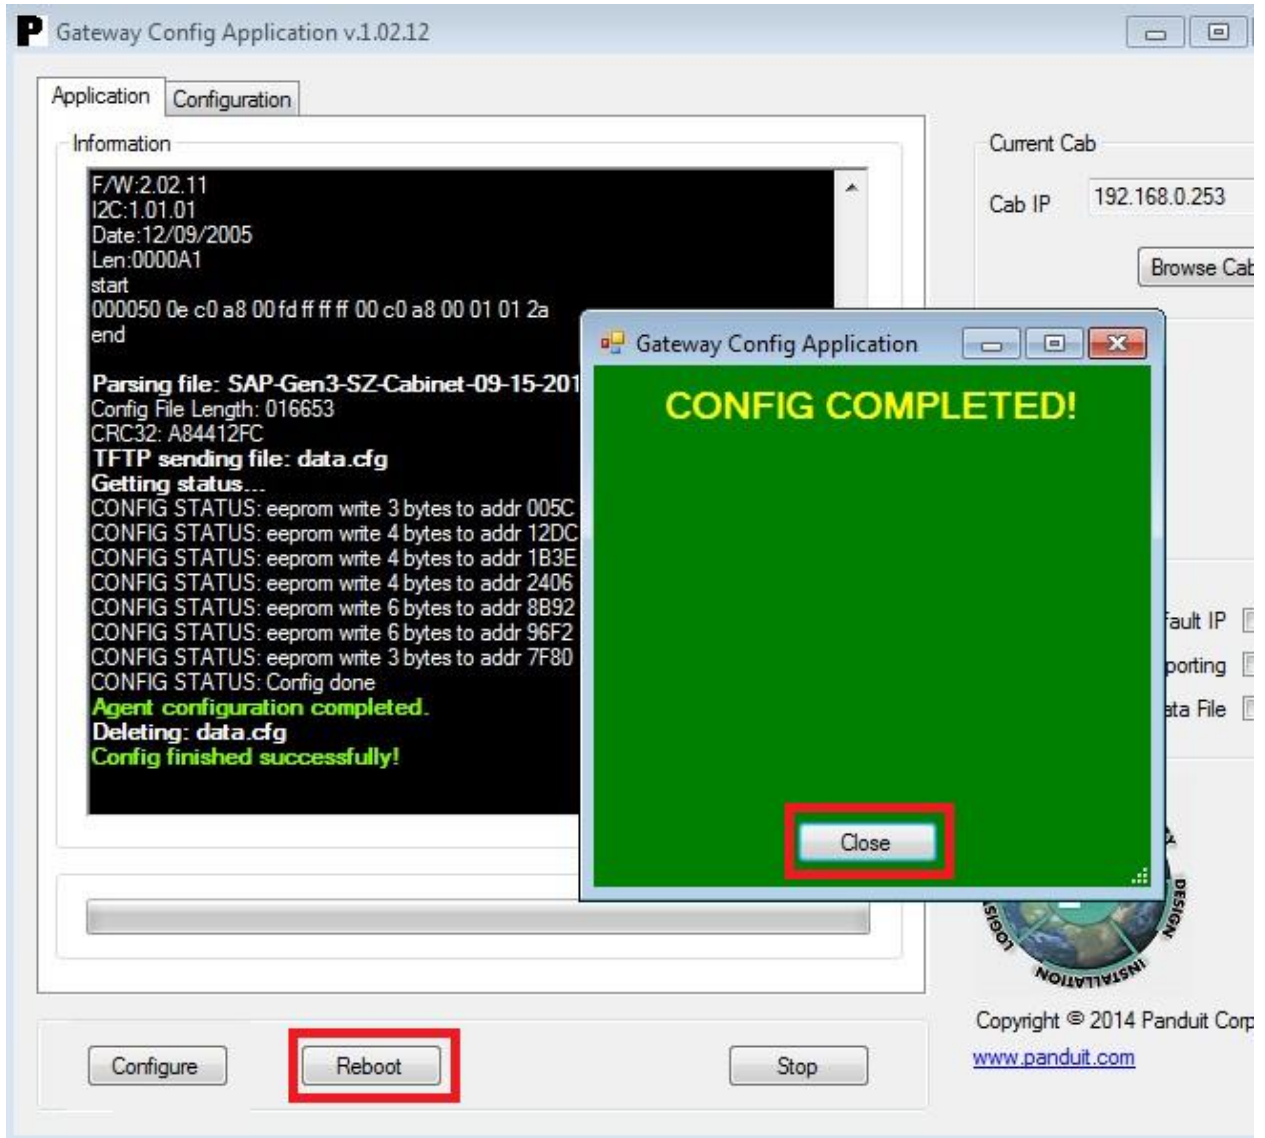

Example .csv file: SAP-SZ-Cabinet-10-04-2016.csv

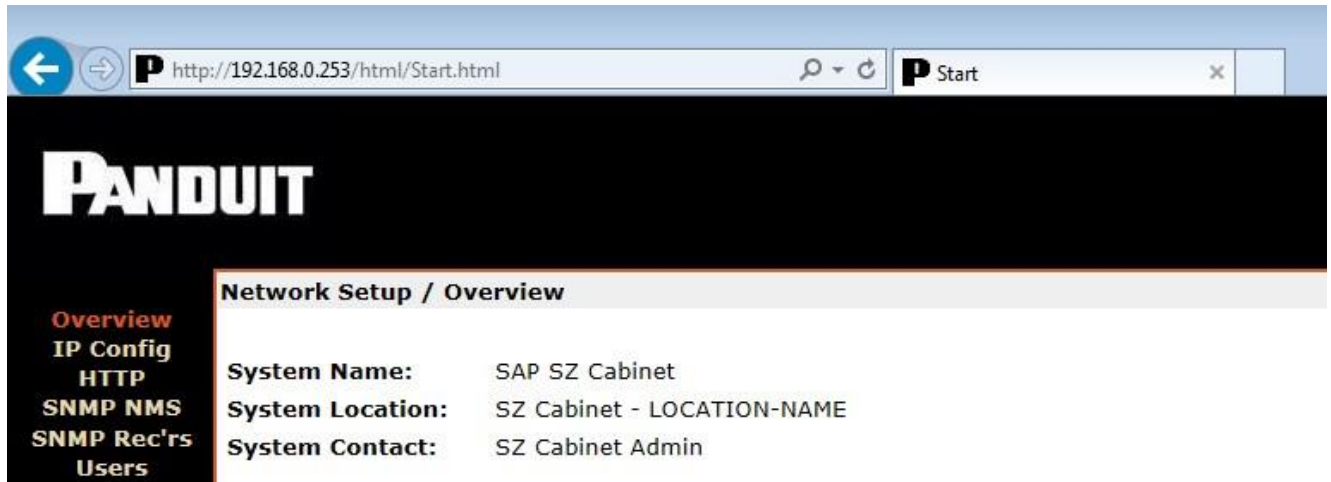

- Ensure the gateway type is EPA126, and the Agent IP Address is 192.168.0.253 (default).
- Once the Cabinet Configuration 'Config File' field shows the .csv file, and the Cabinet Number field is populated by the name selected by the file, click back to the **Application** tab at the top left of the app.
- Now click the **Configure** button at the bottom left, and the Information screen will show the load progress.

- Once it's complete, you'll get a Config Completed green pop-up window. Click **Close** to accept, and then click the **Reboot** button on the bottom left of the app. This will cause a reboot of the appliance.

- Wait about 60-90 seconds, and return to the browser window to open <http://192.168.0.253>.
- Login using user: **admin**, password: **admin**, and click **Login**.
- Now verify that the information from the .csv file was loaded. In this example, the System Name, System Location, and System Contact were changed.

*For the functionality verification of the: temperature sensor, humidity sensor, door sensor, electronic swing handle, and keypad, reference test method SAP-TM-001.
